Our Company

Interceramic began operations in Chihuahua, Mexico in 1979 as a ceramic tile manufacturing company with the most innovative technology at the time. Today it is one of the largest ceramic tile manufacturers in North America with a total production capacity of 450 million square feet per year from nine facilities housed in four different complexes: three in Chihuahua, Mexico, and one in Garland, Texas.

With 34 years in the market, Interceramic has become a leader not only as a manufacturer, but also as a distributor of ceramic tile, bathroom fixtures and setting materials through a unique distribution system of 242 franchised stores in Mexico, 14 company owned design and distribution centers in the US, and an additional 55 independent distributors in the US and Canada, annual sales exceed \$500 million. Interceramic also has distribution centers in Panama and Guatemala in Central America, as well as a franchise network in China.

Corporate Headquarters, Chihuahua, Mexico

Interceramic Branch, Dallas, Texas

Corporate Headquarters, Garland, Texas

INTERCERAMIC GREEN

- **Interceramic Green** is the consolidation of synchronized efforts and actions that contribute to the preservation and protection of The Environment. Our objective is to promote the best use of natural resources.

- Our company is committed and strives to maintain a harmonious relationship between the environment and its processes through efficient planning and achievement of our goals, therefore reducing harm to the ecosystem.

The Green Side of Tile

Interceramic
DIGITAL Technology

FACES

INTERCERAMIC DIGITAL TECHNOLOGY

The word “digital” in its most basic sense, refers to anything composed of numerals, or digits. The word has come to mean anything created or maintained by computers, which use digital processing to organize data.

However, the word “digital” to Interceramic means so much more. With the advancement of this wonderful new technology, it takes the never before design possibilities with ceramic tile and turns it into a reality. Digitally produced product from Interceramic shows a true emulation of reproduction with the depth of detail in the images, and the vast number of faces being shown on these beautiful product series. Some of the Interceramic digital product lines have as many as 72 different images to capture the beauty and elegance of the design.

Interceramic has embraced this state of the art process by continually investing in new equipment, making their production lines even more efficient with better controlled tones and optimum color variation. Making sure that they stay on top of this ever changing industry, Interceramic even educates their designers in Europe to assure that they stay true to their motto, “Simply the Best.” Digital has never been more global, and Interceramic has never been better.

INTERCERAMIC INDESIGN

The obvious leadership in innovation and design was underlined by the creation of Interceramic's InDesign Collection. The definition of the most sophisticated languages: exclusivity, elegance and the latest in daring global trends. This collection shines in the design world for its aesthetic content, its originality and versatility.

InDesign sets the pace in trend, style and fashion with an attractive language both practical and harmonious. It is sophistication in the ceramic world.

It is Interceramic, simply the best!

INTERCERAMIC GREEN SQUARED CERTIFIED

With Green Squared, eco-friendly product specification is now more efficient & consistent.

In accordance with our commitment to maintain a harmonious relationship with the environment, Interceramic embraces even superior standards for our products by becoming Green Squared Certified.

Today, all of Interceramic manufacturing facilities in Mexico and the U.S. are included in a Third Party Audit process then reassures architects and designers that our products meet the industry's green standards. Choosing Interceramic products for sustainable projects is simple, just look for the Green Squared logo.

Green Squared (ANSI A138.1) is the industry standard for sustainable tile & tile installation products. This new all-encompassing multi-attribute standard covers environmental product characteristics, responsible product manufacturing, packaging and raw material extraction, end of product life management, progressive corporate governance, and innovation.

By seeking out Green Squared Certified products, specifiers can put together total sustainable installation systems.

Green Squared Facts

- Green Squared encompasses a full range of products within an industry and made a standard for sustainable choices more identifiable.
- These products have met unique ecological criteria in several different facets of production in order to become Green Squared.
- The Green Squared logo can be recognized in several different categories of the tile industry, certifying many aspects of installation.

* Please see your sales representative on this new technical standard.

All tiles meet or exceed ASTM standards for chemical resistance (ASTM C650), crazing resistance (ASTM C424), and thermal shock (ASTM C484) unless otherwise noted.

NOTE: Due to the inherent nature of fired ceramic tile, it is important to note that the coefficient of friction may vary within and between product runs

Interceramic Colored-Body Porcelain

Interceramic High Density Ceramic

STS

STS - Shade and texture spectrum

STS L

Low STS - The least amount of shade and texture variation attainable in naturally fired clay products.

STS M

Moderate STS - Light to moderate shade and texture variation within each carton.

STS H

High STS - High shade and texture variation within each carton.

STS R

Random STS - Very high shade and texture variation within each carton.

PEI

Group Rating

PEI I

Light traffic - Residential bathroom floors and all interior wall applications.

PEI II

Medium traffic - Residential interior floor areas except entry ways, kitchens, stairs and pivot points.

PEI III

Medium heavy traffic - All residential and very light commercial floor applications. Not recommended for commercial entry ways.

PEI IV

Heavy traffic - All residential and most commercial floor applications, including shopping malls and most public areas.

PEI V

Heavy plus traffic - All residential and all commercial floor applications, where extra heavy duty wearability is required.

Meets recommended guidelines for Americans with Disabilities Act for horizontal surfaces

HD Ceramic

Interceramic's High Density Ceramic is the newest alternative to porcelain tile. Using the latest technologies and the highest quality materials, HD Ceramic is an innovative alternative to porcelain tiles which can sometimes be more expensive. With a vast array of styles, colors and decorative pieces suitable for commercial and residential floor applications, Interceramic's HD Ceramic provides all the benefits of porcelain tile at a fraction of the cost.

Glazed Ceramic

Glazed ceramic tile has been used for centuries and offers consumers more options in color, texture, pattern and overall beauty than most other floor covering materials. With new manufacturing techniques, today's ceramic tile designs are virtually indistinguishable from natural marbles, travertine, slates and other stone products. Ceramic tile is simply a mixture of clays which have been shaped and fired at high temperatures, resulting in a hard body. Characterized by a dark red or white back with a fine glaze over the body of tile, the non-porous glaze creates a surface that is virtually stain proof and very low in maintenance.

Porcelain

Porcelain tiles are usually frost resistant and manufactured using clays (including kaolin and feldspar) that have specific properties. The extremely high firing temperatures result in a tile that is stain- and scratch-resistant and harder than granite. Dense and impervious by definition – with a water absorption rate of 0.5% or less – porcelain tile is produced with either glazed or unglazed surfaces. Unglazed porcelains are usually “through-body” with regard to color, while glazed porcelains are most often glazed over white- or buff-body material. While unglazed porcelains often have higher slip resistance than glazed porcelains, they can also be more difficult to clean than the glazed variety. It is important to take this into account when choosing between different porcelain tiles. There are also many non-porcelain tiles that can be used in environments with extreme freeze/thaw cycles and that are manufactured with properties similar to porcelain.

Glazed Colored-Body Porcelain

Glazed colored-body porcelain is one of the most recent innovations, combining the best qualities of glazed tiles (reduced maintenance issues, increased color and design selection) with those of unglazed tiles (body color that more closely approximates the glazed surface color), making it exceptionally versatile, durable and resistant to wear.

Installation and Reference Materials

Installation procedures recommended are those indicated in the current Handbook for Ceramic Tile Installation as published by the Tile Council of America, Inc. Specification references recommended are those established in the American National Standard Specifications for the installation of ceramic tile, as published by the Tile Council of America, Inc. Due consideration must be taken with regard to the subsurface, intended use of the tile surface, and exposure to foreign substances such as water, oil, acid, etc., when selecting the type of setting material and grout. If in doubt, the manufacturer of these setting materials should be consulted.

Shade Variations

Variations in shade and color are inherent in all fired clay products. This natural quality contributes to the overall visual characteristic of ceramic tile and should be expected. Blending of tiles from at least six different cartons during installation is recommended, as shine/finish can differ under certain lighting conditions.

Limits of Liability

Tests are performed on random samples of Interceramic tile by an independent testing laboratory and are believed to be representative of the general quality of the tile. There is no guarantee by Interceramic that these exact results will be guaranteed on every tile. Interceramic extends no guarantees, expressed or implied, as to slip resistance, wear-time period, gloss or maintenance procedures. Test procedures and individual results are available from Interceramic.

ANSI A-137.1

Interceramic tile achieves the necessary values for the ANSI A-137.1-P188 (American National Standards Institute) requirement. This is the most complete testing done on ceramic tile and includes tests on thickness, facial dimension, warpage, edging, water absorption, crazing, thermal shock, bonding strength and breaking strength.

Warranty

Warranty and Product Use Information

Published test results for Interceramic tile are not guarantees of product performance. All products are subject to variations in coefficient of friction and other technical specifications due to inherent variables in the production process. Test results on all products may vary slightly from tile to tile, and from test to test. Skid-resistant tiles are more difficult to clean; additional effort is necessary to assure contaminants are removed promptly. Since stone is a natural product, it is not possible that every color and marking present in one piece will be present in another. Many glazed ceramic tile products can also vary in shade, color and finish due to the inherent differences in the manufacturing process that can occur over time and from lot to lot. In order to insure that our products meet your individual job requirements, please inspect all stone pieces and tiles prior to installation to determine acceptability. This method will identify any blending or culling necessary. No claims with respect to shade, color or finish, whether in natural stone or glazed ceramic tile products, will be allowed after installation. Unless otherwise stated, Interceramic floor and wall tile is recommended for interior applications only, and is not recommended for use on ceilings or roofs. Check local building codes prior to specification or installation to verify that the technical characteristics of specified Interceramic tile are compatible with all requirements. Printed color samples are for reference only and may not be an exact product match. Contact your Interceramic representative for actual product samples prior to selection, and if you have any questions about Interceramic tile.

In the absence of a demonstrated, post-installation product defect, use constitutes acceptance.

Notice of Warranty

Interceramic guarantees to the original purchaser only that, for a period of one year after the date of purchase, Interceramic will replace any of its manufactured products that are proven to be defective. In order for this warranty to be valid, the following guidelines must be met:

1. The original purchaser must notify Interceramic or an authorized representative in writing within 30 days of the occurrence of any defect.
2. After notification, Interceramic or an authorized representative will inspect and/or test the product for defect and complete a Product Claim form. No claim will be honored without product inspection by Interceramic or an authorized representative.
3. Upon determination that product defect claim is valid, Interceramic will notify the purchaser in writing. In connection with any valid claim, Interceramic reserves the right to either repair, replace or refund the purchase price of the originally purchased product.

EXCLUSION OF IMPLIED WARRANTIES AND OTHER WARRANTIES

THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE ARE EXCLUDED FROM THIS TRANSACTION AND SHALL NOT APPLY TO THE GOODS SOLD. ADDITIONALLY, ALL OTHER WARRANTIES BEYOND THOSE EXPRESSLY PROVIDED BY THIS DOCUMENT OR REQUIRED BY LAW ARE EXCLUDED.

CERAMIC TILE

Glazed floor tile

Routine maintenance of glazed and unglazed floor tile consists of simply sweeping and damp mopping with clean water and a mild solution of neutral cleaner formulated for glazed tile. Areas exposed to heavy traffic can be cleaned with solution of a heavy-duty neutral cleaner formulated for glazed tile and may also require scrubbing, depending on the texture of the surface. It is very important to change the mop water frequently -approximately every 100-500 square feet- depending on how soiled the surface is. Please contact your sales representative for recommendations on the type of cleaner best suited for your application.

Unglazed floor tile

Unglazed mosaic, porcelain or quarry floor tile should be maintained by dust sweeping and damp mopping with clean water and a mild solution of neutral cleaner formulated for tile. Areas exposed to heavy traffic can be cleaned with a solution of a heavy-duty neutral cleaner formulated for tile and may also require scrubbing, depending the texture of the surface. As an unglazed quarry tile floor ages, a patina forms on the surface which gives it a soft shine and keeps the floor looking fresh longer.

Glazed wall tile

Routine maintenance of glazed wall tile usually consists of simply wiping with a damp cloth or sponge. The use of a neutral cleaner formulated for glazed tile is acceptable as long as any residue is removed with a clean water rinse. Countertop applications will require more frequent cleaning in this same manner depending on the exposure to grease, foods, acids, etc. Sealing grout joints on countertops is always recommended to prevent staining. Shower applications will require more periodic cleaning in order to remove soap scum, body oils and hard water deposit buildup. Normally, shower areas may be cleaned by spraying a mild solution of neutral cleaner formulated for glazed tile, letting it stand for three to five minutes, and then rinsing. If the tiled area has been neglected for an extended period of time, a solution of a heavy-duty neutral cleaner formulated for glazed tile is recommended for cleaning.

Sealers

Refer to the manufacturer's recommendations before sealing unglazed mosaics, porcelain and quarry tile. There is no need to seal glazed ceramic tile. However, sealing the grout joints is recommended unless an epoxy grout is used. Please contact your sales representative for recommendations on the type of grout sealer best suited for your installation.

Glass Wall Tile

For maintenance and cleaning, it is recommended to use a soft, clean cloth with warm water or with a non-abrasive cleaner formulated for use with glass. Do not use any cleaners with abrasive agent as these could scratch the tile surface. Glass tile should not be installed in floor applications because it can fracture when exposed to extreme weights and is very susceptible to scratching.

Plank Tile Patterns

Grout Joint Recommendations

Running Bond/Brick Joint Offset and Patterns (ANSI A108.1)

For running bond/brick joint patterns utilizing rectangular tiles (rectified or cut) where the side being offset is greater than 18" (nominal dimension), the running bond offset will be a maximum of 33% and grout joint width of at least 1/8".
